Start using the System
All you have to do is press the big, green “START” button.
If the screen is black, just touch it once to wake it up.
The system will now start to warm up. This will only take a minute or two.

Connect and Turn On your Devices
If you brought any of your own devices, now connect them with the appropriate connectors shown below:

HDMI  VGA  Audio

Select your Source
After the system finishes warming up, you can select the source you want to use.
Rooms might have different options, depending on their capabilities.

Control the Devices
Most devices have options or controls that will appear when the source is selected.
If the device is not detected, you will get a helpful message.

Adjust the Volume
On the left side of the main screen, you can adjust the system volume.
Also, make sure the volume is at a good level on the device or application.

Be Heard with the Microphones
Some rooms have wired and wireless microphones. You can adjust their volume through the “Audio” page.

Shutdown when you are Done
After you finish, turn off the system. Press the “System Power” button, and then press “Shutdown”.
Don’t worry, if you accidentally press it, you can cancel the shutdown.
